

Emergency Button

- battery should last for years
 - > LiFePo + N-Channel MOSFET + Push Button
- send a message without extra costs
 - > for this solution E-Mail (i.e. GMail)
- message should send to more the one recipients
 - > with E-Mail are as many as needed
- only few but reliable services should called
 - > only WiFi and SMTPS
(no IFTTT, ThingSpeak, MQTT, TWILO, TWITTER,...)
- Communication should by encrypted
 - > SSL/TSL -> SMTPS
